Dutch Ocean Group

Dutch Ocean Group

Group of service companies and institutions from the Netherlands active in the collection, processing and analysis of seabed, seawater and atmospheric data for offshore projects, coastal developments and management. The members of the group deliver the complete set of products and services for coastal and marine monitoring, surveying and forecasting.

Acta Marine

Acta Marine is an independent owner and operator of more than 40 workboats for coastal and deep sea waters up to 200 nautical miles. Acta Marine operates all around the world, mainly in the industries Dredging & Marine Construction, Offshore Energy, Survey and Cables & Pipelines. Also for ultra-shallow-water projects, we have the right equipment and know how.

Atlas Services Group

Established supplier of specialist personnel for the hydrographic, offshore construction and seismic survey industries, world-wide. With an extensive customised database, the Atlas Services Group is able to supply survey operators with experienced, qualified, well-referenced and proven personnel, effectively and efficiently. Experienced office staff and 24-hour service provides efficient logistical and administrative support.

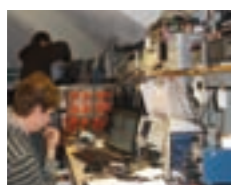

Atlis B.V.

ATLIS product suite SENS offers the world's first database-driven solution that integrates the best available software, supporting the complete hydrographic process from survey to chart. SENS is offered by ATLIS together with its global HydroTeam partners. SENS customers include the Norwegian Hydrographic Service and the European Commission.

Deltares

The Deltares Unit Subsurface and Groundwater Systems has along term experience and great knowledge in the field of seabed mapping, sea bed dynamics, geohazards, foundation behaviour, and seabed modeling. Our clients are the oil & gas industry, marine contractors, engineering companies, project developers, the dredging and mining industry.

JANELCO B.V.

JANELCO is specialised in tailor-made systems for mammal detection and special under-water applications. Hydrophones with filtered pre-amplifiers with a broadband frequency range to over 150 kHz. A range special wideband hydrophones, towed arrays and seabed-mounted sensor structures for Marine biological studies, coastal and harbour protection. See our new HydroEAR sensor system!

Marine Sampling Holland B.V.

Marine Sampling Holland B.V. is specialised in geotechnical- and environmental investigations with a range of equipment varying from Mini-CPT, vibrocorers, pistoncorers, counterflush/airlift drilling systems, grabs, boxcorers, hamongrab, and mini-gravitycorer for each bottom type and water depth. A geotechnical laboratory for tests according to international standards (e.g. EN, BS, ASTM) is available.

MARIS (Marine Information Service)

Specialist in development and operation of internet-based marine data & information management infrastructures and services, websites and electronic publishing. MARIS is operating www.oilandgasobserver.com and www.sandandgravel.com, leading global websites for the oil & gas and dredging industries and www.geo-seas.eu, www.seadatanet.org, and www.emodnet-hydrography.eu, leading European marine & ocean data websites.

Meteo Consult (MeteoGroup) Maritime

Meteo Consult Maritime is part of the MeteoGroup weather forecasting business with affiliated offices in the United Kingdom, Belgium, Germany, Spain, France, Poland, Sweden, Italy and the USA, forming Europe's largest private weather company. MeteoGroup Maritime is headquartered in the Netherlands specialized in offshore weather forecasting and meteocean consultancies.

Nautikaris B.V.

Nautikaris B.V. is active in the sales of Hydrographic Survey Equipment, Oceanographic Equipment, Underwater Connectors, Rugged Field Pc's, Marine Solar Lights and Satel Wireless Radio Data Systems. All products in our line-up have many things in common: High quality, high service and good support.

Noordhoek

Noordhoek is a leading independent subsea contractor operating within the international oil & gas, cable and renewable energy industries. With over fifty years in the business, we have a skilled, motivated and valued workforce which strives to achieve complete customer satisfaction by providing professional, cost-effective and high-quality services where health, safety and environmental considerations are given top priority.

No Limit Ships B.V.

No Limit Ships' Yard, designs, builds and delivers dedicated vessels up to 20 meters length for Hydrographic Survey. The No Limit vessels are semi-custom built and recognized for their superior performance and capabilities, they are proven highly efficient and cost-saving. The No Limit vessels are world-wide used by dredging-, pipe-laying companies, port-authorities, government bodies and private (hydrographic) survey companies.

Nortek B.V.

Nortek develops and produces Acoustic Doppler Current Profilers (ADCP) and current meters for use in the ocean, rivers, lakes and the laboratory. In the Benelux countries and far around we install our instruments and conduct surveys on ocean currents, waves and sediment concentration.

OCN B.V.

OCN Oceanographic Company of the Netherlands is a service company dealing with the collection and application of data and knowledge of the sea and the delivery of oceanographic and coastal monitoring systems. The services OCN provides are (1) monitoring system development and testing, operation and maintenance, (2) consultancy and (3) project management

RADAC B.V.

Since 1998, RADAC develops, produces and markets, The WaveGuide. This is a very accurate radar level gauge to measure waves, tides, storm surge, tsunamis, seiches and sea level rise. It is demonstrated that in all wind and wave conditions the standard deviation for water level is only 1 cm. The radar level gauge is compact, robust and easy to install. The product includes software to analyse the collected data for sea and river conditions.

Rijkswaterstaat

Rijkswaterstaat North Sea Agency, hydrographical division is responsible for routine monitoring of shipping lanes in the Dutch part of the North Sea and, in relation to marine incidents, surveying of wrecks and lost cargo. Two special survey vessels, ARCA and ZIRFAEA, are equipped with sophisticated sensors and oil spill equipment.

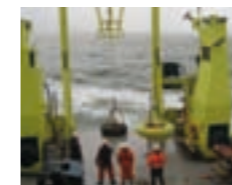

Siri Marine B.V.

Siri Marine provides practical monitoring solutions for the Salvage, Towage, Break-Bulk, Heavy lift, RoRo / Container and Offshore markets. Siri Marine is the developer of hardware and software motion monitoring components, which form a unique combination for improved safety and efficiency in the maritime industry. Siri Marine's specialized consultancy service advises and implements the best solution for your requirements, based on 40 years of maritime experience, off-the-shelf or tailor designed.

Skilltrade B.V.

Skilltrade specializes in Hydrographic Survey training. Courses and training developed by people who gained experience in the field and taught by them. Skilltrade provides a "Hydrographic Survey Category "B" course in Rotterdam. Hydrographic survey modules can be given at a location which best suits our client's individual requirements.

STC B.V.

STC B.V. is part of the STC Group. STC B.V. has a worldwide reputation in high quality training and education for operational and managerial functions in the maritime, logistics and multi-modal transport sector. STC B.V. presents standard courses as well as tailor-made courses.
