

INSTALL

THE IMPACT OF TECHNOLOGY

Install S.R.L is an additional and valuable asset to any survey company or vessel owner working in the offshore market. It provides full I.C.T support on the spot wherever you are in the world. Our team of experts is constantly on call offering technological support round the clock to all our clients worldwide, saving both time and unnecessary expenditure, two of the most fundamental aspects of the survey industry.

Due to the vast experience and length of time that each and every one of our group has dedicated to the survey/offshore industry, we are ready to offer expert knowledge and hands-on help at any time of the day or night.

We have a fully equipped warehouse with all the latest survey equipment available in the market. We have a continuous programme of research, development and testing whereby we aim to deliver the very best possible solutions to all technical and operative demands. By so doing we provide all our clients with optimum end-of-project results.

Vessel owners within the industry know that the setting up, cabling and preparation for any operation is a tiresome and time-consuming project and, most often, is where problems are likely to start. We, at Install, can relieve your company of this responsibility by providing you with a fast-response team of fully trained experts to thoroughly prepare vessels for any projects in which you are involved. Our team can also remain on board during sea trials to assist during equipment testing; taking on the role of supervisor if needed. From your perspective this will provide you with considerable savings both in terms of cost and of time and will guarantee an efficient quality control chain from start to finish. It will also increase your operational efficiency, your response time and your competitiveness in the market.

INSTALL

THE IMPACT OF TECHNOLOGY

Survey companies are well aware that the all-round technical support for setting up a vessel, at the beginning of any project, is essential both to their clients and those carrying out the job. Our group is ready to interface, calibrate, install and provide all necessary equipment in the quickest and smoothest way by offering numerous 'fit-for-purpose' solutions. A team of in-house trained experts is ready to spend time on board to make sure that all personnel are ready to work with the specific equipment installed.

One of our most innovative solutions is the use of 'ready-to-go' containers with mobile survey rooms kitted out and ready to be delivered to any vessel wherever it may be in the world. This lowers both costs and time limits of mobilizing or demobilizing to an absolute minimum.
