

Our Carpet Recycling Journey

Delivery & Installation

Carpets are delivered to site ready for fitting. Offcuts and waste including cardboard tubes and polythene are collected and stored ready for pick up at the end of the event.

Uplift & Folding

Our pullout team will uplift all of our fitted carpets, turning them so that any post event contamination such as screws or other fixings are left on the venue floor ready to be swept up. The carpet is folded into stacks ready for loading.

Loading & Transport

The uplifted carpet stacks are loaded onto a wagon ready for transporting off site. We use the most appropriate size vehicle for the quantity of carpet that needs to be removed. Folding into stacks enables us to load vehicles more efficiently, with more material per vehicle. This increases our capacity whilst reducing the total number of vehicles required in any given period.

Processing & Pelletising

The used carpet is delivered to one of our UK based recycling partners where it is shredded, dyed and processed into pellets. These high grade pellets are now ready to be used in manufacturing reducing the need for virgin polypropylene.

Manufacturing

The pellets created from our post event carpets can be used in many different injection moulding processes. Examples include paint trays, plant pots, building and plumbing materials, many of which are recyclable again at the end of their use...

...and we haven't even mentioned the recycling of our vinyl flooring, cardboard tubes, polythene & underlay!
